

Models

The new 24-hour dual-phase watch combines the advantages of a classical analogue display with a clear differentiation between a.m./p.m. or the day and night cycles. This is achieved by dividing the double meaning of the usual 12-hour scale into two loops. A radially adjustable hour hand follows this excentric curve and indicates thus all 24 hours clearly although rotating with normal angular velocity.

The first assembled watches of an Initial Numbered Edition of 25 individual pieces have been presented at the BASEL 2002 World Watch and Jewellery Show. They are available in 2x2

variations on principle: the sporty "a.m./p.m." model or the elegant "day & night" model, with dark or light dial each.

Mechanism

Mechanical with automatic winding, ETA caliber 2892-A2, luxury finish (perlage, with blued screws), modified with a planetary gearing module for controlling the length of the hour hand, certified COSC chronometer, logo engraved by hand into the rotor (Geneva stripes)

Functions

Hours, by means of continual radial displacement of the hour hand on a dual-phase scale (day and night), minutes, center seconds hand, date at 6 o'clock

Case

Diameter 39,0 mm, height 12,8 mm, 750 (18K) white, yellow or red gold, engraving of number and name, sapphire crystal and visible back sapphire crystal

Dial

Black or silvered finish in two versions "a.m./p.m." or "day & night", colour differentiation of the dual-phase hours scale, with a raised outer ring for distinction of the minute and second graduations, Superluminova luminescent numerals and hands

Band

Calfskin or alligator, black or brown
